

Exercise 10 – Baseball App

Create a console app named BaseballApp with an EF data model that includes the Players table in the *Baseball.mdf* database provided.

- Display the names and batting averages of all players in the Players table in order by the player's last name descending.
- Display the name and average of the players whose first names begin with 'J'.
- Display the names and batting averages of all players with a batting average between 0.3 and 0.35.
